

Anelli di tenuta per alberi rotanti WAS (FKM)

Movimenti Rotanti

MAR-GOM
www.mar-gom.it
www.produzionegomma.it

Descrizione

Anello di tenuta secondo DIN 3760 con un rivestimento esterno in elastomero che ricopre un inserto metallico e con un labbro di tenuta energizzato da una molla, inoltre è dotato di un labbro protettivo dal lato aria.

Materiale:

Elastomero: FKM 80

Inserto: acciaio DIN EN 10139

Molla: acciaio inox per molle 1.4301 (SAE 304)

Colore elastomero: marrone

Caratteristiche: il tipo WAS, rispetto a quello WA, dispone di un labbro protettivo che impedisce l'accesso di sporco dall'esterno. Il rivestimento esterno in elastomero consente una buona tenuta statica, una buona compensazione della dilatazione termica, una buona tenuta con rugosità superiori e in sedi in due parti e una buona tenuta statica su fluidi a bassissima viscosità o gas. Inoltre, grazie all'FPM, l'inserto metallico completamente rivestito e la molla in acciaio inossidabile permette l'impiego con fluidi chimici aggressivi. L'FKM è superiore ai materiali NBR per applicazioni ad alte temperature, alte velocità periferiche e fluidi chimici aggressivi.

Utilizzo: usata su elementi rotanti di macchine come alberi, boccole e assali.

Temperatura (°C): -30 °C ÷ +200 °C

Pressione (MPa/bar): · 0.05/0.5

Velocità periferica (m/s): · 35

Resistenza a fluidi: buona resistenza chimica a oli minerali e sintetici, oli motore e trasmissioni, combustibili, grassi minerali e sintetici, idrocarburi aromatici e clorurati, solventi e prodotti chimici.
